

# Hatch operation

With the Mooij Hatch operation the air inlet and the air outlet hatches are controlled for opening, mixing and closing.

The hatch motors are featured with a gearbox with two output shafts. On both shafts rack and pinion sets are mounted for multiple hatches. Inside the housing two limit switches are built-in for the position " open" and two for the " close" position.

- The Hatch motor is normally pre-cabled and provided with an operation switch.
- Very strong drive system because of the large reduction and rack system.
- All components are galvanized.
- Lubrication of racks and bearings is not needed.
- On each hatch two racks are mounted.
- Available in 1 x 240 of 3 x 240 V 50/60 Hz.
